

Mobile Programming

Lec 4. Counter, Add, Multiply

Ewha Womans University

(1) Count up/down

2

variable

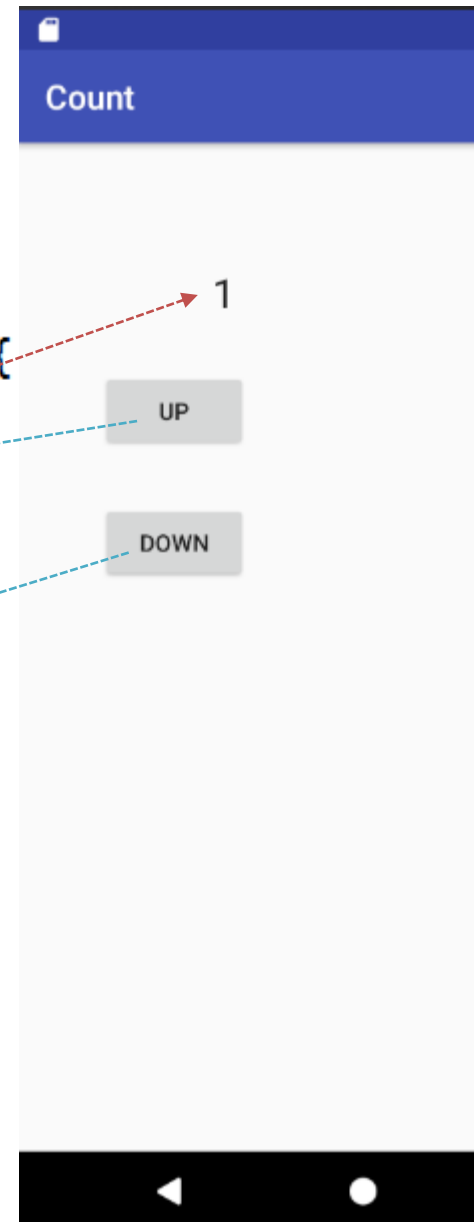

```
class MainActivity : AppCompatActivity() {
```

```
    var number = 0
```

```
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        setContentView(R.layout.activity_main)  
    }
```

```
    fun button_up(view : View) {  
        number = number + 1  
        textView.text = "" + number  
    }
```

```
    fun button_down(view : View) {  
        number = number - 1  
        textView.text = "" + number  
    }
```

Define a variable (Integer)

3

```
var number = 0
```

Indicate “variable”

name of variable

initial value (Integer)

“variable” can vary

```
number = number + 1
```

Convert a number to "Text"

4

```
fun button_up(view : View) {  
    number = number + 1  
    textView.text = number  
}
```

require "text"

but it's a number(integer)

```
fun button_up(view : View) {  
    number = number + 1  
    textView.text = "Val:" + number  
}
```

text + number → text

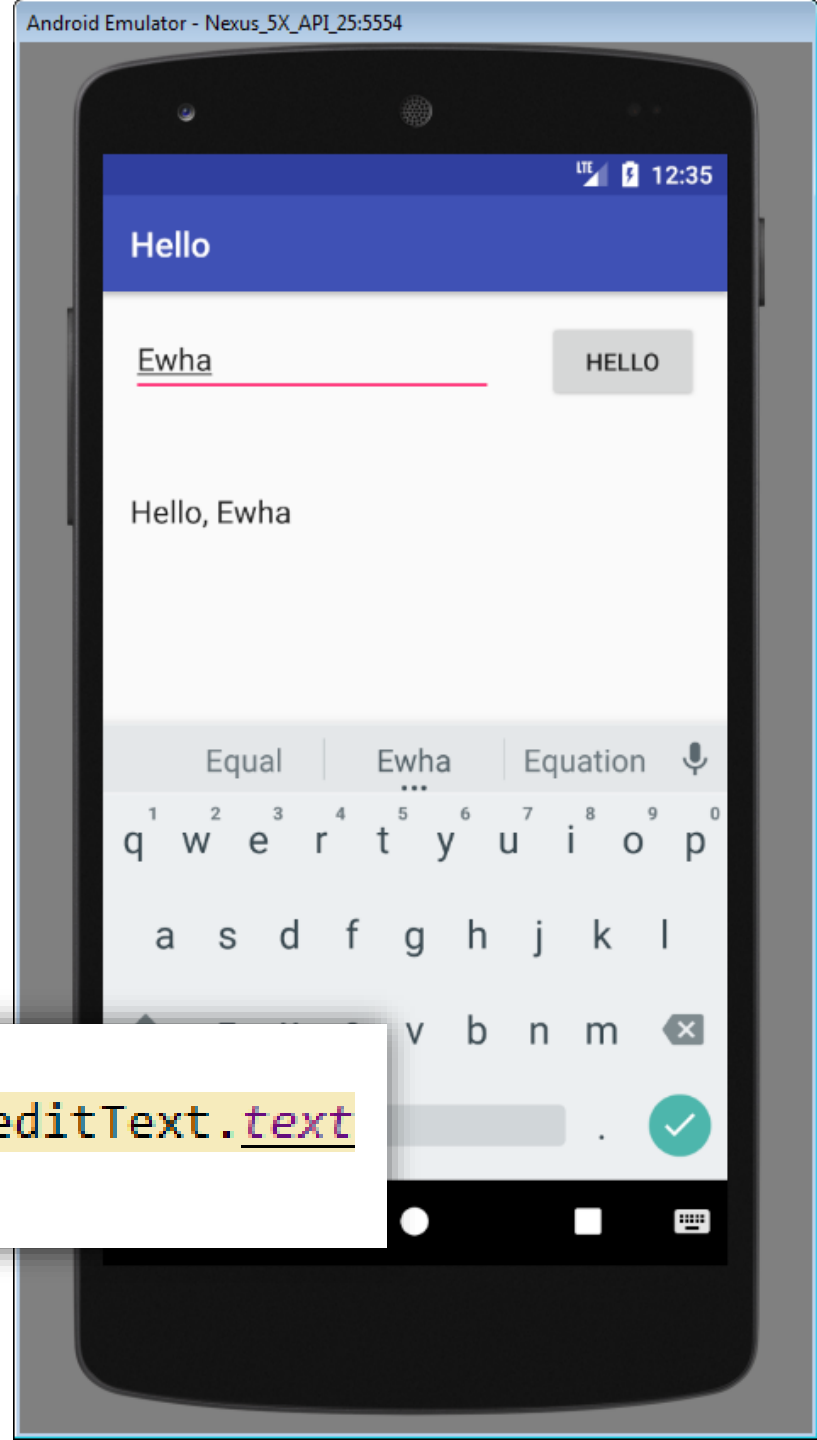

"Val:xxx"

```
fun button_up(view : View) {  
    number = number + 1  
    textView.text = "" + number  
}
```

zero-length text

ex) text + text → text

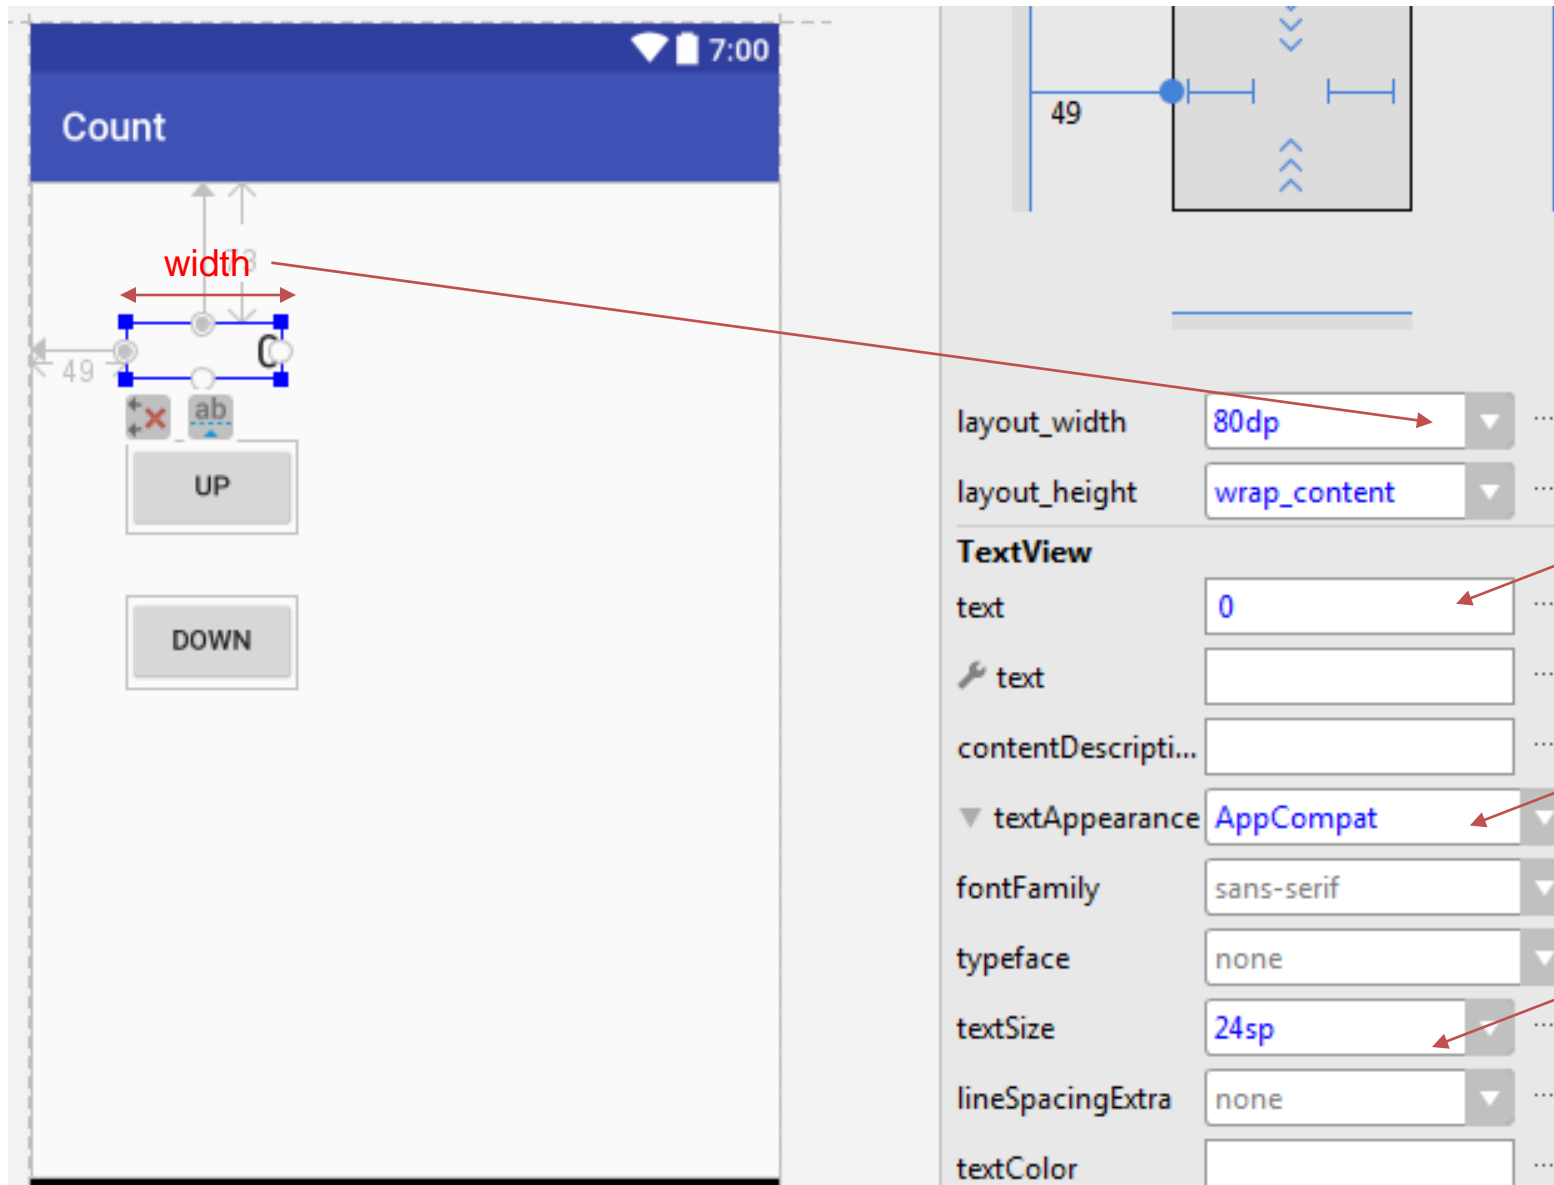

5

```
fun button1(view : View) {  
    textView.text = "Hello, " + editText.text  
}
```

Make text darker, bigger. And, fix the width.

6

Vary in size, but also in density(DPI)

7

BASELINE

MDPI
~160 DPI

HDPI
~240 DPI

XHDPI
~320 DPI

XXHDPI
~480 DPI

- **dp**
 - Density-independent Pixels - An abstract unit that is based on the physical density of the screen of 160 dpi
- **sp**
 - Scale-independent Pixels. This is like the dp unit, but it is also scaled by the user's font size preference.
- **pt**
 - 1/72 inch
- **px**
 - pixel
- **mm**
- **in**

(2) Make two counters

9

```
class MainActivity : AppCompatActivity() {
```

```
    var number1 = 0
```

```
    var number2 = 0
```

```
    override fun onCreate(savedInstanceState: Bundle?) {
```

```
        super.onCreate(savedInstanceState)
```

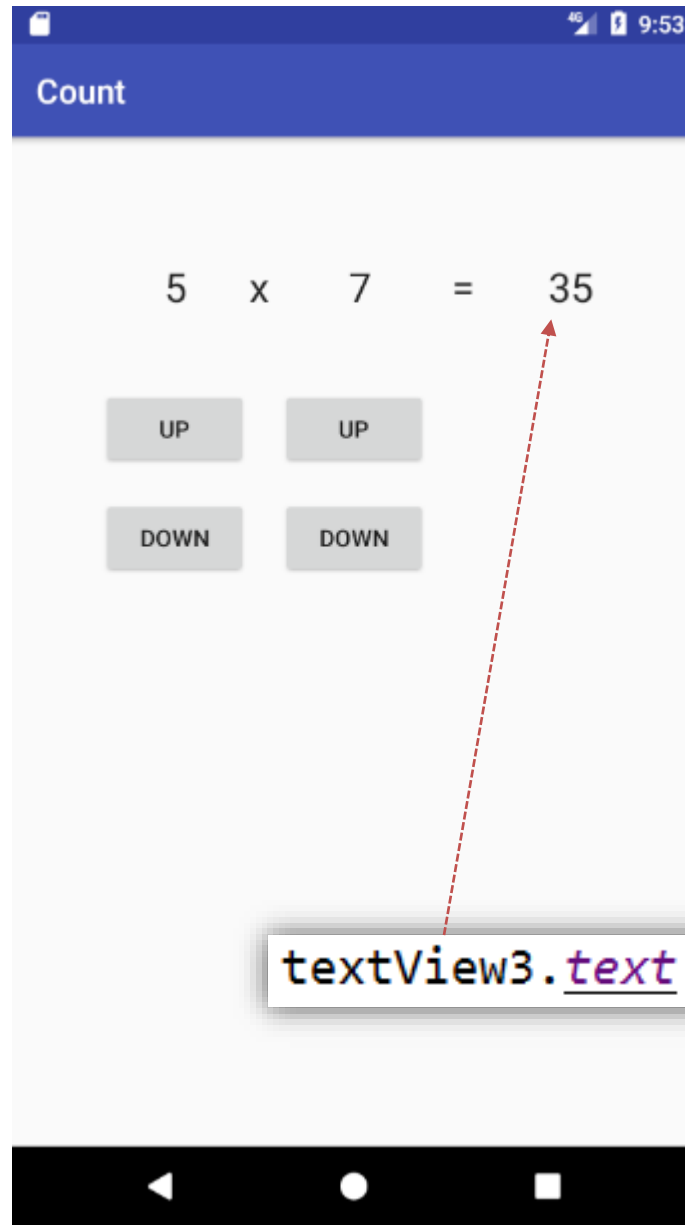

```
        setContentView(R.layout.activity)
```

```
    }
```

(3) 구구단 App?

10

```
textView3.text = "" + number1 * number2
```

Add-up App

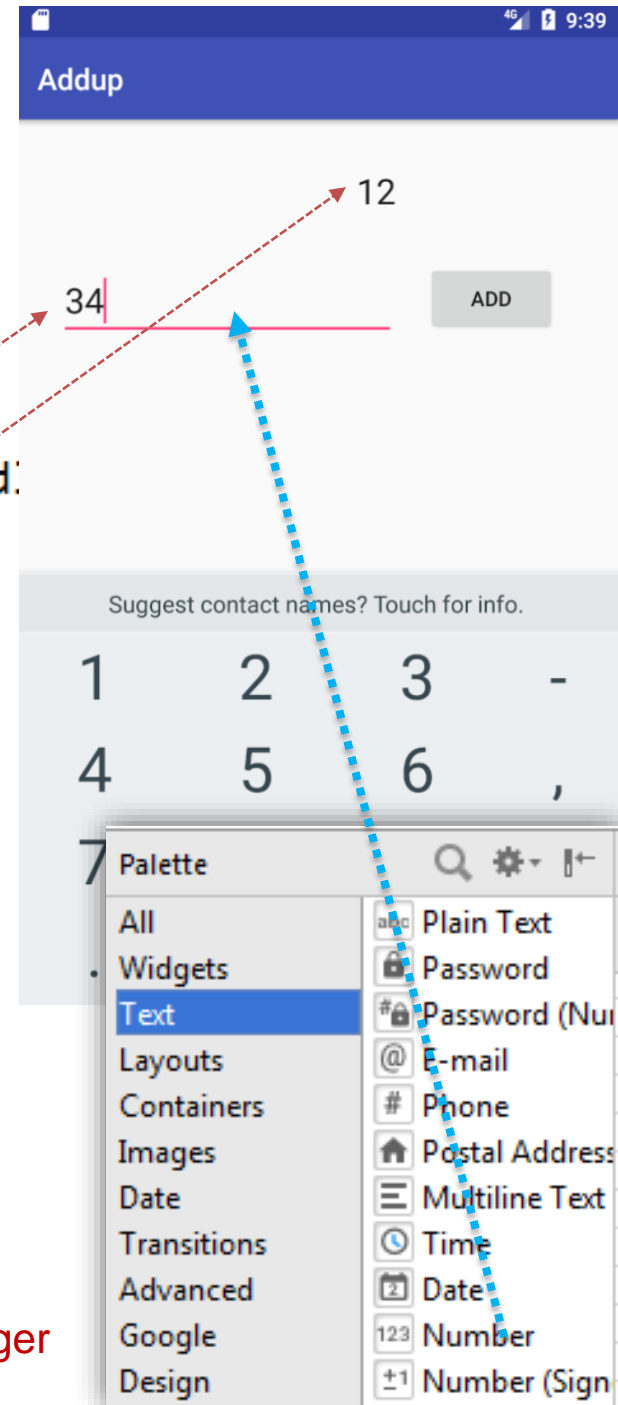

(4) Add up !

```
class MainActivity : AppCompatActivity() {  
  
    var sum = 0  
  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        setContentView(R.layout.activity_main)  
    }  
  
    fun addup(view : View) {  
  
        var n = editText.text.toString().toInt()  
  
        sum = sum + n  
  
        textView.text = "" + sum  
    }  
}
```

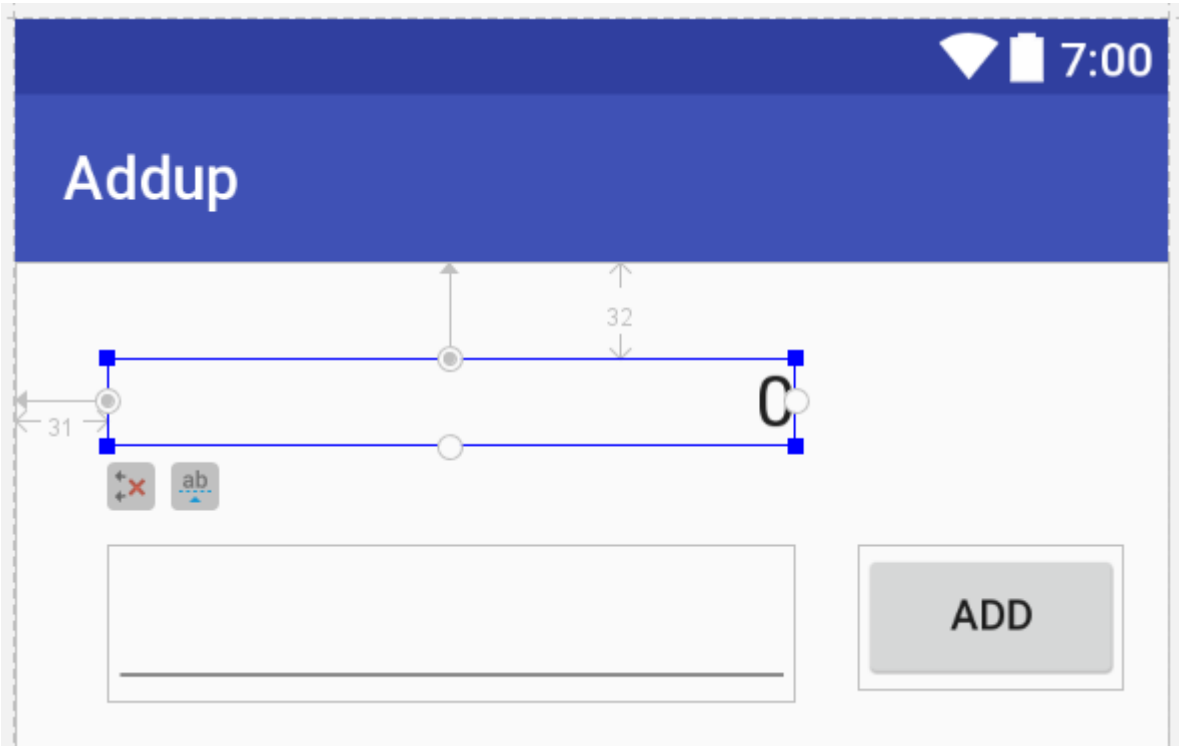

Editable
(not text)

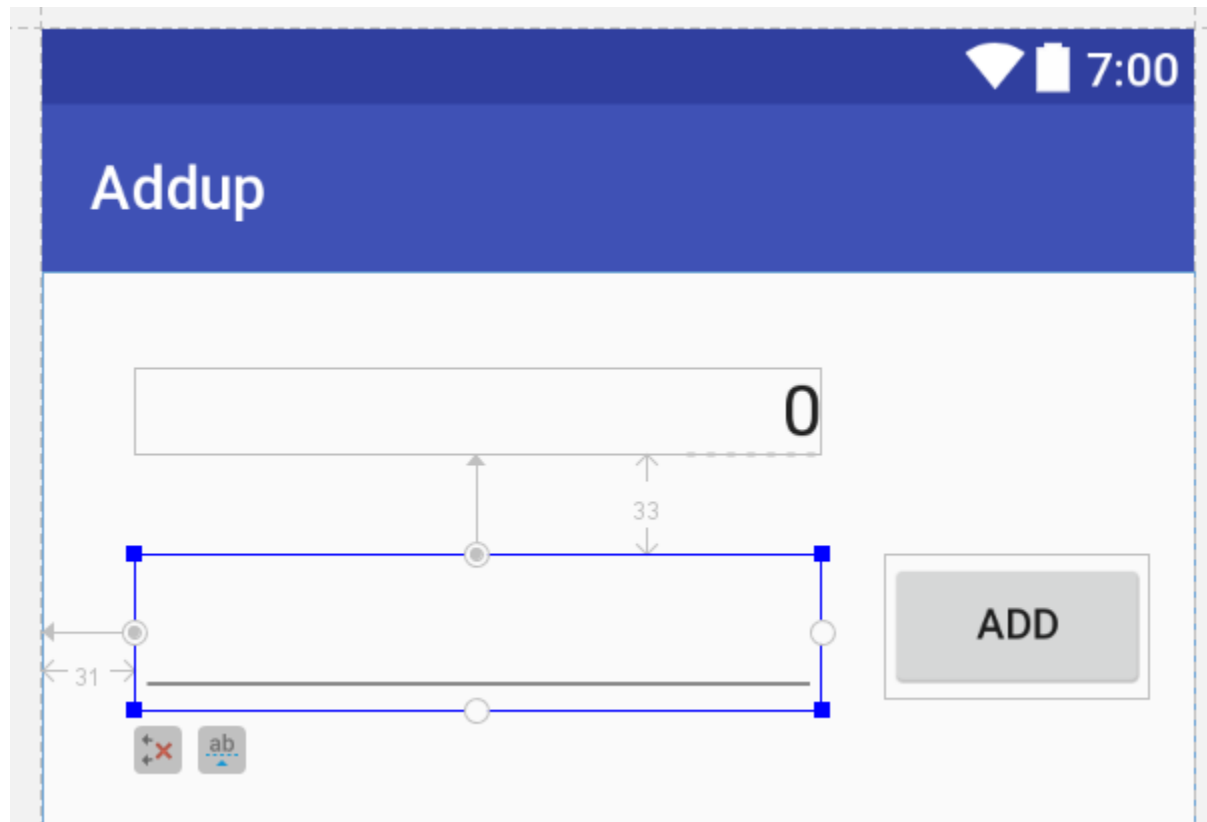

get "text string"
from EditText

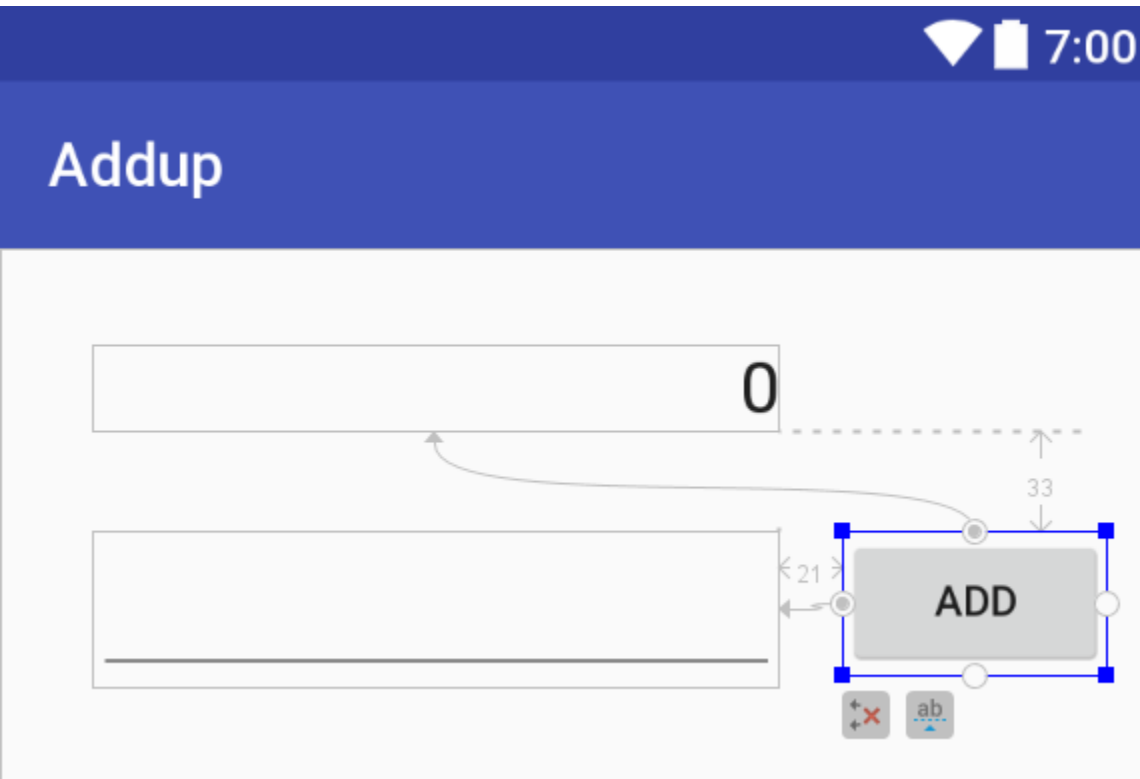

text to Integer

Manual relative layout

(5) Add “CLEAR” button

16
